PROFILE

Business Administration professional turned Analytics Engineer, with twenty years of B2B operations experience now applied to data pipelines and BI.

I design and implement **end-to-end production data pipelines** integrating automated ingestion, Python/pandas processing, n8n orchestration and Power BI star-schema modeling. My approach combines deep business context with a modern technical stack. I apply **outcome-based auditing** — validation against source, alert rules, quality reports and documented traceability — instead of line-by-line code review. I work with AI assistants as pair-programmers while keeping technical judgment and documentation under my responsibility.

01 / EXP Professional experience

◆ Analytics Engineer · Independent Contractor

SEPT. 2025 — PRESENT

CLIENT *TechCam · Client: European industrial multinational · Argentine operations*

Designed and shipped an end-to-end pipeline that automates the client's daily supply-chain reporting, replacing a manual email-and-spreadsheet process. Production system with business-hours SLA, owned end-to-end since inception. Tracks active orders across the client's international supplier network.

- **System architecture:** IMAP ingestion, n8n orchestration with three production workflows (reception, dead-man switch, error handler), Python/pandas processing on a hardened VPS, OneDrive sync, and Power BI dashboard with star-schema modeling.
- **Data transformation (Python/pandas):** fifteen quality validations, composite-key deduplication, date normalization, automatic schema-change detection, and merge logic between historical snapshots and daily deltas. JSON quality reports with differentiated exit codes.
- **Dimensional modeling (Power BI):** three fact tables (orders, requests, in-transit), three dimensions (supplier, country, calendar), DAX measures for logistics KPIs and FX exposure. Knowledge equivalent to Microsoft PL-300 applied in production.
- **Three-layer alerting:** positive notifications (Telegram, email), severity-tiered alerts with automatic pipeline cutoff on critical errors, and a dead-man switch that detects missing data by 6:00 PM each business day.
- **Operational discipline:** resolved thirteen documented production incidents, SHA tracking, <1-minute rollback plan, regression tests, anti-loop protocol. VPS hardened with UFW, Fail2Ban, forced HTTPS and secrets management.

STACK Python · pandas · n8n · Power BI · DAX · Power Query (M) · bash · cron · IMAP · Docker · Coolify · UFW · Fail2Ban

◆ Head of Electronic Security Department

2019 — 2024

Empresa de Seguridad Única S.R.L. · Buenos Aires, Argentina

- **Monitoring center:** designed and operated a monitoring center with real-time visualization of up to 768 cameras and management of 900+ across multiple sites. Owned stack selection, contingency planning and operator training.
- **Multi-site rollout:** led an 80+ site security deployment for a global religious organization, including integration into the monitoring center and emergency protocols.
- **Perimeter security:** designed and operated systems for five gated communities; maintenance contracts for two additional ones. Owned vendor management across domestic and international suppliers, cost and timeline control under B2B contracts.

02 Earlier roles & education

— EARLIER ROLES

IP Installations Supervisor · DEFCO, Buenos Aires (2018–2019). On-site technical supervision for an industrial paper manufacturer.

Regional Exclusive Representative · Sistemas Tecnológicos (2017–2018). Market positioning of imported industrial equipment in Argentina and Paraguay.

Operations Supervisor · SESCA C.A., Venezuela. Project operations for an electronic security firm — vendor management, market analysis, strategic planning.

— EDUCATION & TRAINING

— **B.S. in Business Administration**
Universidad Gran Mariscal de Ayacucho

— **Equivalent to Microsoft PL-300**
Power BI Data Analyst skills applied in production.

— **OT/ICS Cybersecurity · AI Governance**
ISA/IEC 62443, NIST SP 800-82, EU AI Act, OWASP LLM Top 10.
